

Getting Vaccinated

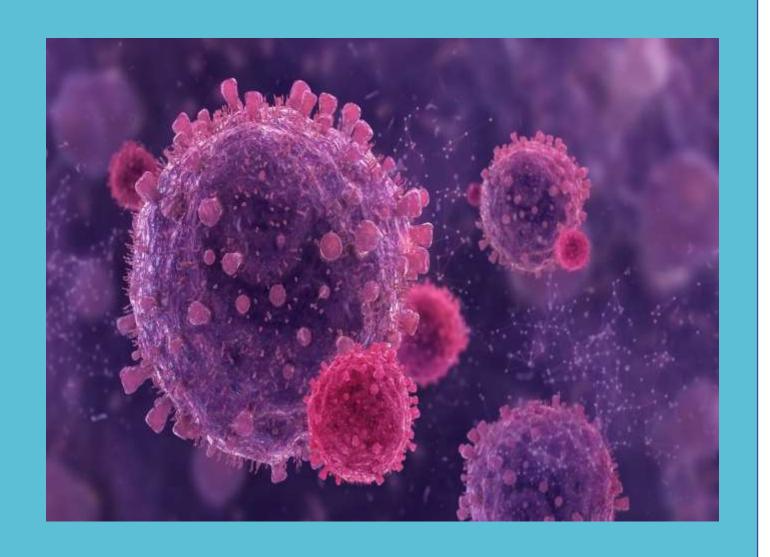

A Visual Resource Guide

Being sick is challenging.

It can affect your daily life, like going to work, school, or meeting with others.

Sometimes, it can be serious. Especially if germs are spread to others.

Luckily, scientists created vaccines that can keep us healthy and safe.

A vaccine is a specific kind of medicine that helps your body build immunity which helps fight against illness or disease.

You might hear others talking about the COVID-19 vaccine, the Flu vaccine, and other vaccines.

Let's see what happens when people get a *vaccine*...

Where and How to Schedule a Vaccine Appointment

This Photo by Unknown Author is licensed under CC BY-SA-NC

There are many places where you can schedule an appointment for the COVID-19 and other vaccines.

You can call your doctor's office, nurse, or clinic to schedule an appointment.

This Photo by Unknown Author is licensed under CC BY-ND

You can call a pharmacy close to where you live to schedule an appointment.

Another option is the pharmacy at a supermarket or a "Little Clinic" at the supermarket.

Insurance	Company Name:

You can call your health insurance provider, like Medicaid, to help you, too.

You can also check with your local health department about vaccine clinics in your area.

Sometimes, you will need to go online on a computer to schedule your appointments.

This Photo by Unknown Author is licensed under CC BY-NC

When you schedule your vaccine appointment, make sure you ask if you need one shot, two shots, or more.

Sometimes, you schedule all of your vaccine appointments at the same time.

Other times, you may schedule your follow-up shot(s) after you received your first shot.

What Happens When You Get the Vaccine

Most vaccines are given by *injection*, also known as a shot.

This means the nurse or pharmacist will use a small needle to put the medicine in your arm.

Before your shot, the nurse or pharmacist will clean your arm with a cotton ball or wipe.

Sometimes the wipe feels cold and wet, but it does not hurt.

A shot has a small needle. Some people are uneasy about shots.

It's normal to be nervous or anxious.

Tips to help when getting a shot:

- Squeeze someone's hand.
- Look away.
- Distract yourself with something, like listening to music, playing a game on your phone, or clicking a pen.
- Take 5 deep breaths.
- Slowly count to 10.

The nurse or pharmacist will give you the shot.

This happens quickly and feels like a pinch.

by Unknown Author is licensed under

You may have to wait for 15 or 20 minutes after you received your shot.

The doctor, pharmacist, or nurse wants to make sure that you feel fine after you got your shot.

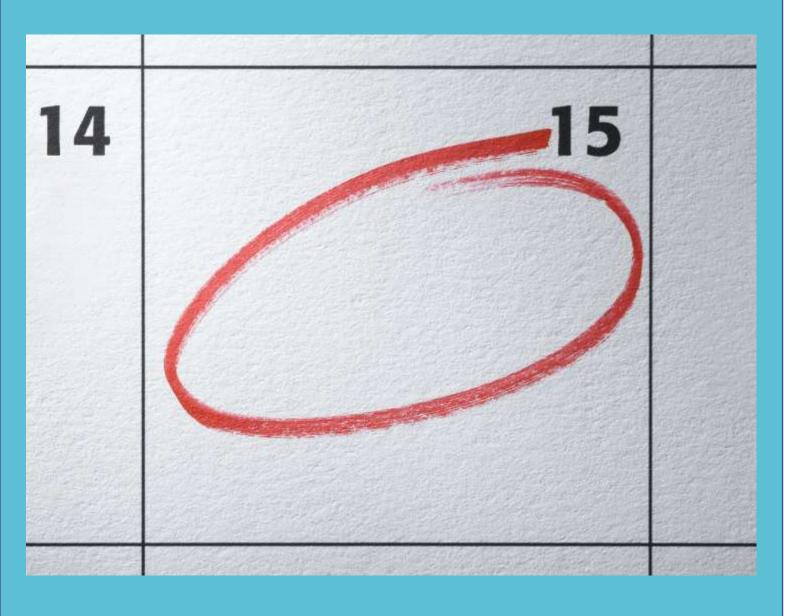

Bring something with you to distract you while you wait, like a game on a device, your phone, a magazine, or a fidget.

Sometimes, you will need more than one shot for your vaccine to work best.

Other times, you will need the same shot each year.

Recommended Adult Immunization Schedule for ages 19 years or older

UNITED STATES 2022

How to use the adult immunization schedule

Determine recommended vaccinations by age (Table 1)

Assess need for additional recommended vaccinations by medical condition or other indication (Table 2)

3 Review vaccine types, frequencies, intervals, and considerations for special situations (Notes)

contraindications and precautions for vaccine types (Appendix)

Adults, just like children, also have an immunization schedule.

We will need vaccinations throughout our lives.

Here is a link to an adult vaccination schedule:

PAGE 20

After getting a vaccine, some people have *side effects*.

This means that you may:

- Have a sore arm
- Feel tired
- Have a headache

This is normal and goes away after a couple of days.

These side effects let us know that the vaccine is starting to work.

When you are vaccinated and take certain precautions, you are keeping yourself and your community safe.

Stop Germs! Wash Your Hands.

When?

- · After using the bathroom
- · Before, during, and after preparing food
- · Before eating food
- Before and after caring for someone at home who is sick with vomiting or diarrhea
- After changing diapers or cleaning up a child who has used the toilet
- · After blowing your nose, coughing, or sneezing
- After touching an animal, animal feed, or animal waste
- · After handling pet food or pet treats
- · After touching garbage

How?

Wet your hands with clean, running water (warm or cold), turn off the tap, and apply soap.

Lather your hands by rubbing them together with the soap. Be sure to lather the backs of your hands, between your fingers, and under your nails.

Scrub your hands for at least 20 seconds. Need a timer? Hum the "Happy Birthday" song from beginning to end twice.

Rinse hands well under clean, running water.

Dry hands using a clean towel or air dry them.

Keeping hands clean is one of the most important things we can do to stop the spread of germs and stay healthy.

www.cdc.gov/handwashing

How to Use **Hand Sanitizer** the Right Way

Apply sanitizer to hands.

Cover all surfaces of hands.

Rub hands together until dry.

National Center on Disability in Public Health Public health is for everyone.

ADDRESSING

Health Misinformation

Misinformation is knowledge or advice that is not true or does not come from facts. Misinformation about health is a problem and can be dangerous. If you are not sure if something is true, do not share it and ask a trusted person!

How do I know if something is true? Ask yourself these questions:

Does the information match what the Centers for Disease Control and Prevention (CDC) and public health departments are saying?

Does the information match what your doctor, nurse, or other trusted healthcare worker says?

Is the information from a source that you can trust, such as a university, government group, or disability organization?

Why do people share misinformation?

- They do not know it is not true
- They did not check the information before sharing
- They want to share things that other people might not know
- They want to share information to help protect friends and family

What does misinformation look like?

- Pictures that started as a joke, but people think are real
- Websites that look real, but have information that is not true
- Quotes with parts of the information changed or taken out
- Statistics (facts about groups of people) that do not include important details
- Graphs or charts that look real but do not include all the information people need
- Sharing pictures or news articles that have old information
- Videos or photos that have been changed

How do I respond to someone sharing misinformation?

- Try to understand why they think and feel the way they do
- Share information you know to be true and that you trust
- Do not get angry at people for their beliefs or fears
- Use language that is easy to understand
